## Tree Care

Artfully shaped trees and shrubs enhance the value and the enjoyment of your property. They also provide your home with a level of privacy and protection from the wind and elements.

The most noticeable element of tree care is pruning. Pruning is an art form. It helps maintain the health of your trees, their structural integrity and transforms plants into living works of art.

A lot of thought, knowledge and care goes into pruning. Not everyone in this industry knows what to remove, when to prune, or even exactly why it is required. I have been told that I have a "zen" for it, having been naturally blessed with artistic vision. In addition to creativity, I have the patience and work ethic that drives me to use only the best materials, and tend to the plants in my care with meticulous attention to detail.

I am a certified horticulturist and I.S.A. Arborist. In addition to pruning and shaping, I can provide tree surgery, bark and wound repairs, tree removal and replacement, planting and transplanting. If your property is marred by unsightly stumps, I offer stump grinding and root extractions. I remove dead, diseased or damaged wood and tend to the health of your trees and bushes. Root feeding and mulching, insect control and management of any disease are vital for the health of your trees.

Are you experiencing growing concerns? Are your trees obscuring your view? Raising the canopy and limbing will make your trees and shrubs manageable again.

Nothing dresses up a property like the clean, sharp lines of a perfectly sculpted hedge. Whether you are looking for a small ornamental hedge, or require a tall wind or privacy screen, I can provide the precision trimming and shaping you're looking for.

I would be happy to give your trees a health and safety evaluation, with a detailed, written estimate for any work you may need done.
